

## Tension Gauge

### 1. Measuring Instrument

The Tension Gauge is a precision instrument developed and made in China.

### 2. Shock protection

The tension gauge comes equipped with a shock Absorber as a standard feature. This greatly reduces damages due to impact (as a result of dropping the instrument or incorrect use).

### 3. Measuring range

Fast means of checking fabric tension in either direction of weave. It completely eliminates the errors which inevitably arise when screens are tensioned by feel and checked by hand.

### 4. Operation

The Tension Gauge operates entirely mechanically.

### Technical Data

Measuring principle	Mechanical measuring of the fabric's sagging under a constant force
Measuring value	No time consuming conversion of units
Measuring range	7 -50 N/cm Tolerance 5% of the measuring range
Weight of instrument	500g
Dimension of instrument	100 X 100 X 50
